

Computer Science: A Structured Approach Using C++, Second Edition: A Structured Approach Using C++, 2nd

Based on the tenet that good habits are formed early, authors Behrouz Forouzan and Richard Gilberg consistently emphasize the principles of structured programming and software engineering. Every complete program uses a consistent style, and as programs are analyzed, styles and standards are further explained. Whenever possible, the authors develop the principle of a subject before they introduce the language implementation so the student understands the concept before dealing with the nuances of C++. In addition, a vast array of figures and tables visually reinforce key concepts. By integrating software engineering principles and encouraging the student to resist the temptation to immediately code, the text builds a solid foundation in problem solving.
