

# Text, Speech and Dialogue: 13th International Conference, TSD 2010, Brno, Czech Republic, September 6-10, 2010. Proceedings (Lecture Notes in Computer ... / Lecture Notes in Artificial Intelligence)

The annual Text, Speech and Dialogue Conference (TSD), which originated in 1998, is now starting its second decade. So far more than 1,000 authors from 45 countries have contributed to the proceedings. TSD constitutes a recognized platform for the presentation and discussion of state-of-the-art technology and recent achievements in the field of natural language processing. It has become an interdisciplinary forum, intertwining the themes of speech technology and language processing. The conference attracts researchers not only from Central and Eastern Europe but also from other parts of the world. Indeed, one of its goals has always been to bring together NLP researchers with different interests from different parts of the world and to promote their mutual cooperation. One of the ambitions of the conference is, as its title says, not only to deal with dialogue systems as such, but also to contribute to improving dialogue between researchers in the two areas of NLP, i. e., between text and speech people. In our view, the TSD Conference was successful in this respect again in 2010. This volume contains the proceedings of the 13th TSD Conference, held in Brno, Czech Republic in September 2010. In the review process, 71 papers were accepted out of 144 submitted, an acceptance rate of 49.3%. We would like to thank all the authors for the efforts they put into their submissions and the members of Program Committee and reviewers who did a wonderful job helping us to select the most appropriate papers. We are also grateful to the invited speakers for their contributions. Their talks provide insight into important current issues, applications and techniques related to the conference topic.
